EDUCATION

Techspire College

Affiliated with Asia Pacific University (APU)

Bachelor of Science in Information Technology (BSc IT)

Kathmandu, Nepal

Kuala Lumpur, Malaysia

Expected 2027

PROJECTS

ETL-ELT Pipeline

2026

Python, APIs, Data Transformation

Built an end-to-end data pipeline from source extraction to transformed, end-user-ready outputs.

- Extracted data via API calls, transformed raw records into structured datasets, and prepared curated outputs for downstream use.
- Connected ingestion, transformation, and delivery steps into one reproducible workflow, strengthening hands-on ETL/ELT design skills.
- Applied data cleaning and transformation logic to improve consistency, usability, and analysis readiness.

Model Context Protocol (MCP)

2026

Python, Client-Server Architecture

Developed an MCP-based workflow to integrate multiple tools and resources through a unified server-client architecture.

- Built a centralized server layer that coordinated tools and resources through a single integration point.
- Organized client communication, configuration, and modular Python components to support a faster and more scalable workflow.
- Demonstrated practical understanding of protocol-driven systems, modular design, and workflow optimization.

Customer Satisfaction Analysis

2026

R, Data Analysis, Visualization

Analyzed customer rating behavior to identify the strongest factors influencing satisfaction scores.

- Evaluated rating patterns across delivery types and user segments using exploratory analysis techniques in R.
- Identified instant delivery as the delivery type associated with stronger ratings compared with standard and express options.
- Found that premium users tended to provide higher ratings, highlighting a valuable customer segment for business attention.

VR Fitness Game Data Cleaning & Analysis

2026

Python, Jupyter Notebook, Data Cleaning

Cleaned and analyzed a VR fitness game dataset to understand gameplay engagement, repeat-play patterns, and dataset quality issues.

- Performed notebook-based data cleaning and preprocessing to improve consistency and usability before analysis.
- Analyzed which games accumulated higher play hours and which titles were replayed more often by users.
- Summarized player-behavior insights to support clearer interpretation of engagement trends.

SKILLS & ACTIVITIES

Technical Skills: Python, R, SQL, Pandas, NumPy, Matplotlib, Seaborn, PostgreSQL, Git, GitHub, Jupyter Notebook, API-based data ingestion, ETL / ELT, data cleaning, data transformation

Soft Skills: Problem solving, analytical thinking, communication, collaboration, adaptability, attention to detail

Certifications & Training: Associate Data Engineer — DataCamp; GitHub Foundation — DataCamp; Become a Python Master — Programiz; Python Numpy for Data Science — Programiz; Learn SQL Basics — Programiz; Uncertainty Quantification in Deep Learning — PIE & AI Kathmandu

Activities: Career Conclave 2025 — Volunteer
